# Concept Questions: Source Transformations

1. Use source transformations to find I_0.

2. Use source transformations to find I_0. Note: this is problem #3 in the Loop-Current Method. You can transform both sides of the circuit and solve for the current flowing through the 6 kΩ resistor at the top. Use that information to find I_0.

3. Use source transformations to find V.

4. Use source transformations to find I_0.
